Find what your coding agents wrote down

Claude Code and Codex keep notes for their next session. LokalBot makes them searchable, next to your meetings and screen.

READ EVERY TEN MINUTES · SEARCHED WHERE YOU ASK

Claude Code

`~/.claude/projects/*/memory`

`importer-locking.md` `prefs.md`

Codex

`~/.codex/memories`

`MEMORY.md` `memory_summary.md`

+ session summaries

→

LokalBot your library

`agent-notes.sqlite`

title · path · date · text

credentials redacted

→

- Ask
- Quick Recall
- `search-notes` own switch
- `search_agent_notes` own switch

✕ never `CLAUDE.md`, `AGENTS.md`, skills

Other agents ask too. `lokalbot-cli search-notes` and the MCP tool let one agent find what another one noted, once you allow it.

ASK CITES THE NOTE

Ask — Agent notes

Why does the importer take an advisory lock?

Two nightly runs once wrote the same batch twice, so the importer takes a Postgres advisory lock first [1]. That's Claude Code's note from Nov 3; worth confirming in the code.

1 **Importer locking decision**
Agent note · Claude Code · importer — Open file ↗

Quick Recall

importer lock

AGENT NOTES

Importer locking decision
Claude Code · importer

Nightly job schedule
Codex · ops-scripts

A note is an agent's summary, so Ask presents it as a lead to check, not a fact. A note row opens the agent's own file.

TURN IT ON

Mac

1. Settings › Screen & activity — **Read coding agent notes**, then Turn On
2. Same place — **Claude Code**, **Codex**: whose notes are read
3. Settings › AI agents · optional — **Agent notes**: other agents may search them

Windows · Linux

1. Settings › Day Memory — **Read coding agent notes**, then Turn On
2. Same place — **Claude Code**, **Codex**: whose notes are read
3. Settings › Privacy & Data · optional — **Allow external agents to search agent notes**

Off by default
Turned on after a notice. Turning it off deletes LokalBot's copy.

Notes only
Never instruction files, skills, settings or credentials.

Search only
Never in the day digest, the overnight review or About you.

Stays in your library
A remote Think model you approved sees the notes it reads, as with meeting text.

New in 0.13.0. Word search only. Readers tested on sample folders; nothing run on Windows by hand.

Pictures are drawings with made-up content, not screenshots.
