MAC · AGENT MODE · OFF BY DEFAULT

Hand off work to an agent

Two ways to give an agent a task with its context already attached: your actions from a meeting, or whatever is in the window in front of you. Both are off until you turn them on, and nothing reaches an agent until you send it.

FROM A MEETING

Summary
A meeting from the last day is summarized, with its action items.

→

Your open actions
One Agent Mode task each, up to eight. An action never gets a second task.

→

A drafted task
A prompt in the composer, the meeting attached, and a folder for what the agent makes.

→

You press Send
Or tasks start on their own, four at a time, if you chose that.

FROM ANY WINDOW

^⇧H
Or **Hand off this window** in the menu bar. The focused window is read once.

→

A brief
Your Think model writes Goal, Where it stands, Done so far, Next steps, Open questions and Constraints.

→

You review
Edit it, write it again, or skip to a plain template. Then pick where it goes.

→

Hand Off
Agent Mode, Claude Code, Codex, or Copy. Claude Code and Codex wait for your Send.

TURN IT ON

What	Where
Meeting actions, after each summary	Settings → Meetings → Processing → **Hand off my actions to Agent Mode after each summary**
Meeting actions, on request	A meeting's More menu → **Hand off my actions to Agent Mode**. No setting needed.
Start without a click	Settings → Meetings → Processing → **Start handoffs automatically**. Agent Mode's approval mode still decides what an agent may do without asking.
Any window	Settings → Ask → **Enable the Hand off shortcut**. The shortcut is ^⇧H unless you change it.

WHAT IT READS, KEEPS AND SENDS

- **A window:** all of its Accessibility text, including text scrolled out of view, the selected text, and a screenshot when Screen Recording is allowed. Excluded apps and sites and windows with a password field aren't read. Credentials, card numbers and IBANs are redacted, and the screenshot is dropped when anything was redacted.
- Nothing goes into screen memory, and Hand off works with screen memory off.
- The window's text goes to your Think model to write the brief: on this Mac if that model is local, or to the server you approved for Think.
- Each window handoff is saved as a folder under `handoffs/` in your library, readable only by your user, and deleted after 7 days.
- **A meeting:** the attached meeting's summary is read and sent to Agent Mode's model only when the task is sent.
- The prompt tells the agent not to send, post, publish, buy or delete anything. Full details are in `PRIVACY.md`.

LIMITS

- Mac only. Claude Code and Codex are offered only when they're installed.
- Only meetings from the last day hand off automatically, so importing old recordings doesn't fill Agent Mode.
- New in 0.12.3. It is covered by automated tests, but has had little use in real work yet.
