MAC · AGENT MODE · OFF BY DEFAULT

Hand off work to an agent

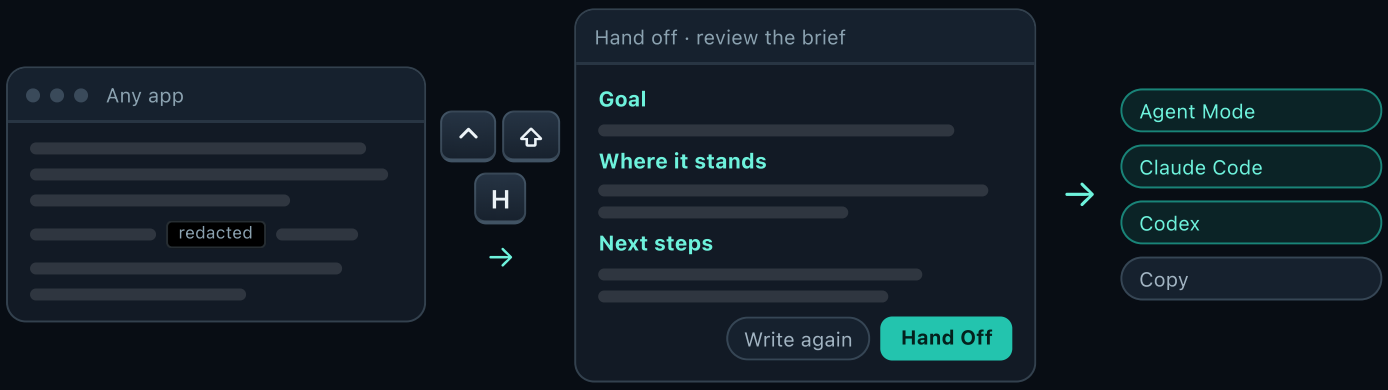

Give an agent a task with its context already attached. Nothing reaches it until you send.

FROM A MEETING

Your open actions become Agent Mode tasks, one each, up to eight, with a prompt, the meeting and a folder. Each waits for Send.

FROM ANY WINDOW

One shortcut reads the window in front, your Think model writes a brief, you edit it and choose where it goes.

TURN IT ON

- Settings › Meetings › Processing — **Hand off my actions to Agent Mode after each summary**
- Same place — **Start handoffs automatically**: no click, four at a time
- Settings › Ask — **Enable the Hand off shortcut**

Read once

The window's text and a screenshot. Never added to screen memory.

Secrets stay out

Password windows and excluded apps aren't read. Credentials, cards and IBANs are redacted.

Kept 7 days

A private folder under `handoffs/` in your library, then deleted.

You press Send

The brief is written by your Think model. Claude Code and Codex wait for you.

New in 0.12.3: covered by automated tests, with little use in real work yet. Mac only. Only meetings from the last day hand off by themselves.

Pictures are drawings with made-up content, not screenshots.
