MAC · MEETINGS · OFF BY DEFAULT

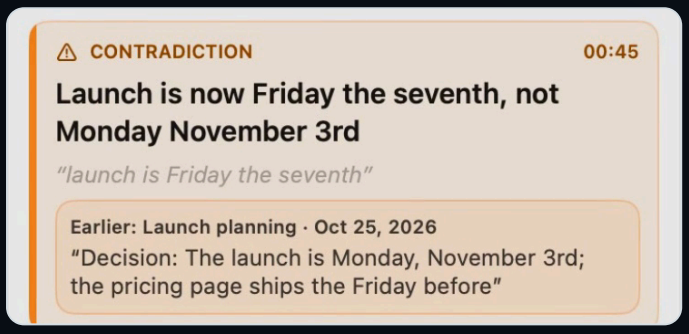

Live Radar and Follow-through

Catches what matters while you record, then drafts the follow-up.

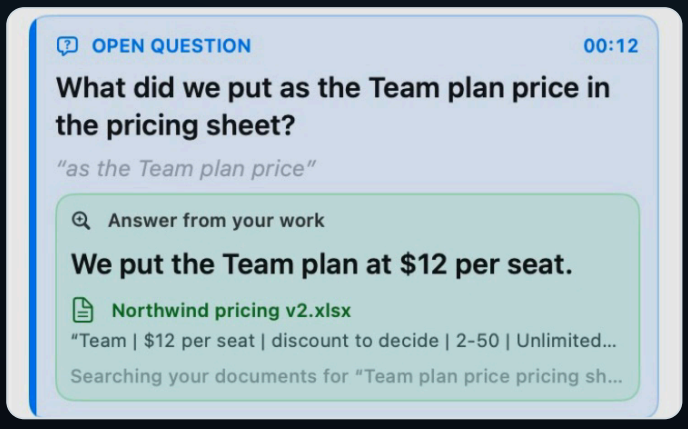

WHILE YOU RECORD

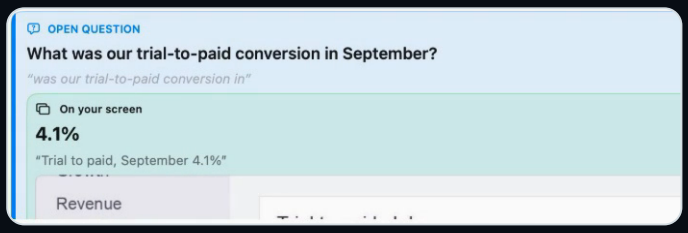

A promise, with who and when.

A conflict with what an earlier meeting decided.

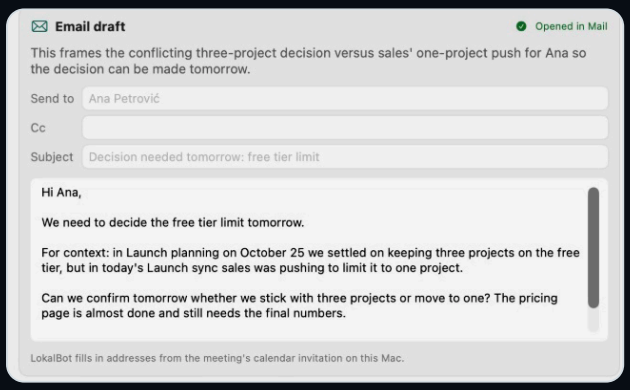

A question, answered from your work, with the row it quotes.

Or from your screen: something you had open earlier.

AFTER THE MEETING

1. **Follow Through… on one action**
   It reads that meeting and plans the work.
2. **It drafts**
   An email, an invitation, or a task for Claude Code or Codex.
3. **You approve each step**
   Edit it first if you like.
4. **It opens as a draft**
   LokalBot never sends anything itself.

TURN IT ON

- Settings › Meetings › **Live Radar**
  Then press Start Radar in a recording
- **Screen answers · Live answers**
  Same section, each off by default
- Processing › **Turn-by-turn live text**
  Text about 1 s behind the speaker, not 2–5

Your Think model

On this Mac, nothing leaves it. A Think server gets only what you approved.

Audio stays here

The model reads transcript text. Email addresses are never sent.

It must quote

An item or answer without a matching quote is dropped.

You approve

Radar starts when you press Start. Follow-through only proposes.

First built on a hosted model. On a local Think model it is covered by tests, not yet by real meetings, and speed on a small model isn't measured. Mac only.

Pictures: the app on sample data, filmed on an earlier build.
